

Rutuja Pandule

Frontend Developer - Vue.js | React.js

Pune, Maharashtra | +91 7264080098 | rutu74ja@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Summary

Frontend Developer with 3+ years of experience building scalable, component-based web applications, including hands-on ownership of a Vue.js platform spanning customer-facing and admin portals. Skilled in translating wireframes and design systems into responsive, accessible, cross-browser interfaces, integrating REST APIs with robust error and loading-state handling, and optimizing rendering performance (Lighthouse ~90%, strong Core Web Vitals). Additional depth across React.js brings versatility in component architecture and state management across modern JS frameworks. Led code reviews and established frontend conventions to support maintainable, scalable architecture, and mentored junior developers. Brings hands-on experience consuming AI/ML services and embedding intelligent UX patterns, having independently built a multi-agent automation system (Claude CLI) and an OpenAI-powered Chrome extension.

Technical Skills

Frameworks & Libraries: Vue.js, React.js, Redux, Material UI, Konva, TanStack Query

Languages: JavaScript (ES6+), TypeScript, Java, HTML, CSS, GraphQL

Frontend Architecture & Practices: Component-Based UI Design, State Management, Cross-Browser/Device Compatibility, Performance Optimization (Code-Splitting, Rendering), Accessibility (WCAG 2.1 / a11y), SOLID Principles, Responsive Design

APIs & Integration: REST APIs, GraphQL, API Error & Loading-State Handling, Node.js (learning), Express.js (learning)

AI Integration: Consuming AI/ML Services, Claude CLI, OpenAI API, LLM Integration, Intelligent UX Patterns

Styling & Tools: Tailwind CSS, CSS3, SCSS, Webpack, Figma

DevOps, Cloud & Infrastructure: AWS, Docker, Kubernetes, Linux, CI/CD, Git, GitHub, NPM, Postman

Databases: MongoDB (learning), PostgreSQL (learning)

Testing: Jest, Vitest, Playwright (learning)

Web3: Wallet Integration (MetaMask, Crypto Wallets)

Experience

Nonstop io Technologies Pvt. Ltd. - Pune, India

Associate Senior Frontend Developer Mar 2023 – Apr 2026

Travel Platform (User & Admin Systems) [Vue.js, Tailwind CSS]

- Owned end-to-end frontend **architecture** for both customer-facing and admin portals built in **Vue.js**, delivering ~25 features across the system in 4 months as the sole frontend engineer.
- Built **reusable, modular UI components** and managed **state** across both portals, ensuring consistent behavior across browsers and devices.
- Translated wireframes and design specs into **responsive, accessible interfaces**, with close attention to detail across all breakpoints.
- Integrated front-end features with **REST APIs**, handling loading, error, and edge-case states to ensure reliable data flow across both portals.
- Optimized rendering and load performance through efficient component structuring and code-splitting, achieving a **Lighthouse performance score of ~90%** and strong Core Web Vitals (LCP, CLS).
- Built a Header Tree View Editor, a dynamic component for admin portal navigation management, cutting manual effort spent updating headers/footers across user-facing applications.
- Led **code reviews** and established frontend architecture conventions for the codebase, cutting PR review cycle from ~3 days to same-day, and onboarded 1 junior developer onto the Vue.js stack.

Genetic Risk Assessment Platform (Healthcare) [React (TypeScript), Vue.js, Konva, CSS, GWT, Java]

- Built a reusable Pedigree Builder component using Konva, adopted across 3+ product teams and eliminating duplicate implementations.
- Delivered Google Docs-style collaboration features including real-time canvas interactions, multi-select, and undo/redo in nearly 50% of the estimated timeline.
- Resolved 30% of critical production issues in a legacy healthcare platform, improving stability and reducing support tickets by 40%.
- Delivered features in 2-week Agile sprints within a cross-functional team of 8 engineers, maintaining consistent delivery over a 3-year engagement; mentored 2 junior developers through code reviews and pair programming.

EdTech Assessment Platform [React, Vue.js, Electron.js - Accessibility-focused]

- Raised platform **accessibility (a11y) compliance** from 55–65% to 75–80% by auditing and remediating WCAG 2.1 AA violations, including keyboard navigation, ARIA roles, and focus management, across a full Electron.js + React desktop application.
- Implemented accessible UI component patterns including skip links, live regions, and colour contrast fixes, adopted site-wide and expanding usability for 12% of users relying on assistive technology.

Healthcare Management Platform [Next.js, Tailwind CSS]

- Sole frontend developer who architected and shipped a full elderly-care management platform in 6 weeks, ~25% under the estimated timeline.
- Built a JSON-driven dynamic form builder that auto-generates UI from config, cutting new-form development time from ~2 days to ~2 hours.
- Designed a reusable component library following **SOLID principles**, reducing UI duplication by ~40% and cutting onboarding time for future developers.
- Authored unit and component tests using Vitest for the JSON form builder, achieving ~80% coverage on critical rendering and validation paths.

Web3 Event Management Platform [React.js, Vue.js, Redux, Material UI, Web3]

- Built event listing, ticketing, and attendee management UI, integrating 4 REST API endpoints with Redux middleware and Web3 wallet authentication (MetaMask, crypto wallets), handling loading, error, and empty states across all views.

Projects & Open Source

- **AI Agents for SDLC Automation (Claude CLI)** - Built a multi-agent system (BSA, Design, Developer agents) that consumes AI services to plan, design, and ship small-scale POCs end-to-end, reducing project setup from days to under an hour.
- **AI Webpage Summarizer - Chrome Extension** - Built a Chrome extension that consumes the OpenAI API to generate and download webpage summaries as .txt files, embedding an AI-driven UX pattern into everyday browsing. [OpenAI API, JavaScript, HTML]
- **A11y Lens - Accessibility Visualizer Chrome Extension** - Built a Chrome extension that visually overlays WCAG and accessibility issues directly on webpages, highlighting ARIA, focus, and structural violations in real time. [JavaScript, Chrome Extension]
- **NPM Package: Custom React Hooks Collection** - Published a TypeScript React hooks library to NPM covering async data fetching, debounce, local storage sync, and UI interactions; 200+ downloads. [NPM, TypeScript, JavaScript]

Certifications

- HackerRank JavaScript (Intermediate) Certificate - HackerRank, 2026
- HackerRank React (Basic) Certificate - HackerRank, 2026

Awards & Honors

- Author of 29 technical articles on React, TypeScript, and frontend architecture - medium.com/@rutuja.pandule
- Impact Player Nomination, 2025 - Nonstop IO
- Best Volunteer, 2025 - Nonstop IO
- Star of the Month, Jan 2024 - Nonstop IO
- Best Newcomer 2023 - Nonstop IO (awarded to 1 engineer per cohort)

Education

B.E., Computer Science & Engineering - Savitribai Phule Pune University
8.24 / 10 CGPA | 2019 – 2023
